Comprehension is a one-line way to create or transform collections.
List Comprehension

```
numbers = [1, 2, 3, 4, 5]

squares = [n * n for n in numbers]

print(squares)

numbers = [1, 2, 3, 4, 5, 6]

even_numbers = [n for n in numbers if n % 2 == 0]

print(even_numbers)
```

Iterating Existing Dictionary

```
students = {
    "John": 80,
    "Alice": 90,
    "Bob": 70
```

```
}

result = {k: v + 5 for k, v in students.items()}

print(result)
```

Lambda Functions

```
numbers = [1, 2, 3, 4]

result = list(map(lambda x: x * 2, numbers))

print(result)

numbers = [1, 2, 3, 4, 5, 6]

result = list(filter(lambda x: x % 2 == 0, numbers))

print(result)
```

```
numbers = [1, 2, 3, 4, 5, 6]
```

Square of the number using map and lambda.

```
result = list(map(lambda x: x*x, numbers))

print(result)
```
